Saving time and money for consignment sales...

Wanzl - a renowned name in the trade for more than 50 years and still favoured today for its sophisticated universal logistics solutions. With our international experience in storage and transport of goods we have augmented the range of consignment sales equipment with a number of effective items.

Order picking and sales container

Roll pallet

Our products are produced as standard models, modified precisely to meet our customers' requirements or customised to suit the storage systems and different range and order structures.

Order-picking trolley

Order-picking trolleys from Wanzl are efficient and variable, speeding up processing times from order receipt through to goods provision - for shorter delivery times and more satisfied customers.

...effectively!

With the tremendous time pressure in distribution centres the main aim of all consignment sales processes is to minimise processing times and ensure maximum protection of the goods against damage. Wanzl products achieve this aim effectively and economically.

Everywhere where goods are manually removed, moved and made ready for further processing we provide systems which have proved their worth practically for consignment sales processing all over the world.

Special solutions for special jobs

Wanzl supplies order-picking equipment for all applications - also customised to your specifications upon request.

With ergonomic concepts, careful choice of materials and the very latest, computer-controlled production processes we guarantee the very best construction and reliable function.

The KT4 order-picking trolley, the special model for particularly heavy loads.

Here are several of many special transport solutions which were developed in accordance with customers specifications. Our design department works flexibly - to fulfil your wishes.

The Wanzl „Logistics & Industry“ team gets your goods moving with the right products and expert know-how!

Our standards set the standard

Wanzl quality policies during all production stages result in products which guarantee the best materials, first-class construction and thorough surface treatment. This ensures long-term, maintenance-free use and the security of all your investment.

Head start in development

Wanzl quality is a precisely defined process which already starts with the initial rendering in the design department. State-of-the-art 3D CAD systems and FEM simulation software exactly define the manufacturing parameters for components and assemblies down to the last thousandth of a millimetre.

Guaranteed safety

Each Wanzl product is subjected to stringent tests in in-house laboratories before it reaches our customers. The test criteria include bearing capacity, durability, robustness and other factors. The results are products with a GS mark which more than satisfy the requirements of standards such as EN 1929 and DIN 32601. In collaboration with the product service of the TÜV German technical inspectorate, we have developed quality standards which considerably overreach conventional specifications.

Best material quality

Only the very best quality manufacturers are considered for the annually processed 30,000 tonnes of steel wire and more than 15,000 tonnes of tubing, as only their materials meet our high demands with regard to surface quality, strength, welding properties and bending characteristics.

High degree of automation

CNC technology and robotics, semi-automatic and fully automatic manufacturing islands and production lines characterise the high-precision processes in all works. Much of our production equipment has evolved from the unique specialist knowledge in wire and tube processing. This guarantees a constant and high quality standard.

Surface treatment

Iron and steel components require special attention. At Wanzl, one of the ten largest galvanising works in Germany, you are in the hands of experts. With fully automatic process control each individual component is galvanised with a high-gloss finish and provided with either a transparent or coloured plastic powder coating to specifications - and so thoroughly, that Wanzl products were already awarded the „Galvanotechnik“ seal of approval in 1982.

Quality management

Process safety is guaranteed for all operational procedures. From material procurement through to final assembly and on-site installation each step is defined, monitored and recorded in accordance with the QMS criteria (DIN EN ISO 9001:2000). For one hundred percent quality.

Quality wheels

Wanzl sets quality standards - especially with regard to transport comfort. Maintenance-free wheels with double ball bearings and non-wearing tread with steering forks mounted on ball bearings make our models smooth-running, quiet and easy to steer; features which your customers really appreciate.
